Step 6. The 50th percentile day is the date assigned for the initial extended stay review. Column 7 shows the eighth day after admission to be the day that this patient comes up for extended stay review.

The patient was admitted on 3 November; therefore, the eighth day will fall on 11 November. Prior to or on 11 November, the committee or groups responsible for conducting extended stay review will make a finding as to whether further stay is medically necessary.

In the above example, the stay percentile used to define extended stay was the 50th percentile (column 7). If, based on the initial review, the patient's stay in the hospital was approved for extension beyond the 50th percentile, the date for the second extended stay review is determined in accordance with the hospital's plan, e.g., the 75th percentile (as suggested in the *PSRO Program Manual*, paragraph 705.26).

Subsequent extended stay review dates should be set by the physician advisor or the peer review (utilization review) committee as necessary, based on the patient's medical condition and the attending physician's evaluation of the patient's progress.

Index to the Length of Stay Tables

If a diagnosis does not appear in the Index, its corresponding *ICD-9-CM* code can be found in the *International Classification of Diseases, 9th Revision, Clinical Modification,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978, Volume 2 Diseases: Alphabetic Index. The diagnosis group containing the *ICD-9-CM* code can then be located in the length of stay tables.

DIAGNOSIS INDEX

This diagnosis index lists common diagnoses and gives the number of the *ICD-9-CM* List A diagnosis group to which each diagnosis belongs.

Also included are:

Geriatric Length of Stay in PAS Hospitals, by Diagnosis and Operation, United States, 1979
Pediatric Length of Stay in PAS Hospitals, by Diagnosis and Operation, United States, 1979

The length of stay series began in 1963, and certain volumes are still available from the Commission on Professional and Hospital Activities. Also for selected years there are length of stay books for particular regional groups of hospitals, for pediatric patients, and for geriatric patients.

PREFACE

This book is one volume of a set of 14 books presenting statistics on hospital stay during 1979 in North America. Twelve volumes describe stays for either diagnoses or operations in the United States, in each of the four U.S. census regions, or in Canada. The thirteenth and fourteenth volumes display data on both diagnoses and operations for pediatric and for geriatric patients in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities.

These statistics, which are also available on computer readable magnetic tape, can provide a valuable perspective for physicians, administrators, PSROs, and planners who make decisions based on length of hospitalization. They can also serve as an aid in establishing check points for "continued stay review" (PSRO) and in the implementation or revision of utilization review systems.

We extend our appreciation to the hospitals that supported this study by making their data available.

DISCUSSION OF THE DATA

Source of the Data

Data in this book were compiled from individual patient discharge abstracts submitted by hospitals participating in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities (CPHA).

CPHA is an organization dedicated to the improvement of hospital and medical care through research, education, publishing, and systems development. Established in 1955 under grants from the W.K. Kellogg Foundation, CPHA is nonprofit, nongovernmental, noncommercial. CPHA is sponsored by the American College of Physicians, the American College of Surgeons, the American Hospital Association, and the Southwestern Michigan Hospital Council.

The following steps explain, and Figure 1 diagrams, the PAS method of storing and retrieving medical data.

BEST AVAILABLE COPY

1. In each participating hospital, medical record personnel transfer information from the record of each discharged patient onto a PAS Case Abstract (Figure 2). The data may also be put onto a data tape at the hospital.
2. The abstract or tape is mailed to the center of PAS operations in Ann Arbor, Michigan, where it serves as input to the computer system.
3. Data then undergo a comprehensive "cleaning" process and detected errors are corrected by contributing hospitals.
4. The computer system produces sets of reports which give comprehensive statistics on separations plus listings of individual case abstracts in various sequences.
5. The computer system continually adds to a permanent history data file.
6. Length of stay statistics from this file are annually published in this series of length of stay books. The stored data are also available to researchers on a contractual basis.

Data Quality

Data quality has always been and remains one of CPHA's major concerns. Although the hospital has basic responsibility for the quality of PAS data, CPHA shares that responsibility in its role as an extension of the hospital's medical record department.

Quality control of PAS data begins before a new hospital submits its first case abstract and continues as an ongoing system involving personal monitoring, computer checks, and education programs. In spite of these efforts, errors do occur. There are three ways errors can be introduced into PAS data: 1) the basic patient medical record can be incomplete or in error, 2) errors can be made in abstracting information from the medical record to the PAS Case Abstract, and 3) errors can be introduced during processing.

Although CPHA has indirect influence over the quality of the medical record through education and through feedback from use of PAS reports within the hospital, basic responsibility for the accuracy of the medical record rests with the physician and others in the hospital contributing to it. Clearly, the abstractor cannot add to the medical record. Errors or omissions made in it will be carried forward to the PAS Case Abstract.

CPHA goes to considerable lengths to prevent and correct errors in abstracting by training PAS hospital medical record personnel in coding and abstracting methods, by monitoring their work, and by judiciously checking and editing patient data for errors. During processing, over 350 computer checks* are performed on each abstract to check the reasonableness of the data received. When illogical, invalid, or missing data are detected, an error message is printed and the hospital is notified, often by phone. About 40% of the errors detected in the computer audit can be and are corrected at CPHA; the remainder must be handled by the hospitals because only they have the information necessary to make the corrections. Hospitals make such corrections on a voluntary basis.

---

*The following are examples of discrepancies and inconsistencies in the data that are detected by the computer audit: hospital day of operative episode exceeding total stay, cesarean sections with a normal delivery diagnosis, a sex-specific diagnosis or operation with the wrong sex recorded. Examples of invalid data detected by the computer are diagnosis and operation codes that do not exist in the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM),* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

Coverage

The length of stay tables in this book display stay distributions for 484,711 operated separations during 1979 from 242 nonfederal, short-term* Canadian hospitals participating in PAS. Short-term psychiatric hospitals participating in PAS were excluded. Patients studied were selected from a total of 1,186,998 separations. Only those patients who were operated are included in this book.

Characteristics of all Canadian hospitals that participated in PAS during 1979 are shown in Table A. Some of these hospitals did not participate for the entire 12-month period. In addition, because of the unavailability of data at the time of processing, data for some of these PAS hospitals are not included in the length of stay tables.

*Short-term hospitals are defined as those in which the median stay is shorter than 45 days.

Organization of Length of Stay Tables

The length of stay tables in the body of this book are organized according to the operation groupings in *ICD-9-CM List B: Hospital Procedure Groups.*[1] Within each operation group, patients are further stratified by single or multiple diagnoses and age.

ICD-9-CM List B: Hospital Procedure Groups

With the development of the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM), CPHA List B: Hospital Operation Groups* has been replaced by *ICD-9-CM List B: Hospital Procedure Groups,* which reflects the procedures contained in the new classification.

In List B there are 249 groups that contain at least one UHDDS Class 1[2] procedure. Fifteen of the 264 List B groups consist solely of Class 2, 3, and 4 procedures. This book displays data only for those 249 groups with Class 1 procedures.

Patients were assigned to the *ICD-9-CM* List B operation groups on the basis of their principal procedure. Operation information for all separations from PAS hospitals during 1979 was coded using *ICD-9-CM.* "Principal procedure" is an item in the Uniform Hospital Discharge Data Set (UHDDS) and generally is that therapeutic procedure most related to the principal diagnosis.

[1] *ICD-9-CM List B: Hospital Procedure Groups* is based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM),* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

[2] Additional information regarding UHDDS principal procedure and classes of procedures can be obtained in *UHDDS Classes of Procedures, ICD-9-CM,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

Definition of Multiple Dx Patients

A patient is classified in the multiple dx category if he had at least one valid secondary diagnosis in addition to the principal. The following codes are not considered valid secondary diagnoses for purposes of this classification:

1) Manifestation codes
2) Codes V27.0-V27.9 (outcome of delivery)
3) E codes (external causes of injury and poisoning)

Explanation of Statistics

The operation group titles heading the tables are followed in parentheses by the operation codes they include. These codes refer to *ICD-9-CM.*

Length of stay is calculated from admission and separation dates entered on the PAS Case Abstract, counting the day of admission but not the day of separation. Patients who left the hospital on the day of admission were counted as staying one day in the calculation of average stay and variance, but as staying less than one day in the calculation of the percentiles. Thus, if more than 5% of the patients in a cell left on the day of admission, the 5th percentile is shown as "<1."

Patients who were hospitalized 100 days or longer are not included in column 2, "Number of Patients"; column 3, "Average Stay"; or column 4, "Variance." The percentiles shown in columns 5 through 11, however, do include these patients.

The variance displayed is an unbiased estimate of the mean squared deviation from the average. For each cell it is calculated as $\sum_{i=1}^{N} (X_i - \overline{X})^2/(N-1)$, where the X_i's are the length of stay for each patient, $\overline{X}$ is the average stay in the cell, and N is the number of patients in the cell.

The 5th, 10th, 50th, 75th, 90th, 95th, and 99th percentiles of stay are shown. If, for example, the 10th percentile for a group of patients is four days, it means that ten percent of the patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

The value of a percentile for a group of patients is determined by arranging the individual patients' stays from low to high. Counting up from the lowest stay to the point where half of the patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total patients gives the 10th percentile, and so on.

Exclusions

The length of stay tables exclude:

(1) patients who died,
(2) patients admitted from other short-term hospitals,
(3) patients transferred to other short-term hospitals,
(4) patients who left against medical advice,
(5) patients with length of stay greater than 99 days (these patients are included only in the percentile calculations).

These patients are excluded because they are not typical short-term patients (i.e., their stays are not "manageable" by the physician).

Other exclusions include stillborn, patients with incalculable age or stay, illegal or unrecorded principal diagnosis or principal procedure, unrecorded separation status, and patients with diagnosis-age, operation-age, or operation-sex inconsistencies. Also excluded are newborn with illegal or unrecorded birthweights.

Defining the Extended Stay[1] Case

Although utilization review in Canadian hospitals has not had the regulatory impetus of the Medicare and PSRO programs in the United States, Canadian hospitals have equal reason to be concerned about the wise use of resources. The instructions which follow are those found in the length of stay books for the United States. The techniques employed can be used by any Canadian hospital conducting a review of those cases whose stay exceeds the norms for matching cases listed in *Length of Stay in PAS Hospitals, by Diagnosis, Canada, 1979* or *Length of Stay in PAS Hospitals, by Operation, Canada, 1979.*

Concurrent review of a continuous hospital stay that equals or exceeds the period defined in the hospital's utilization review plan or memorandum of understanding with the PSRO is called extended stay review. This review, whether applied universally to all patients within the facility or "focused" on known or suspected problem areas, is designed to answer the following question: is further hospitalization medically necessary?

Ideally, this question is posed at that point in the patient's hospitalization which is neither so early as to be annoyingly pointless nor so late that opportunity for cost containment has passed. The median (50th percentile) stay for similar patients, as reflected in reasonably current length of stay tables, represents an effort to arrive at a sensible compromise as to the "correct" day on which to initiate the review process.

To satisfy the requirements for extended stay review, a method of defining an extended stay must begin with a definition of factors that affect stay. Presented here is a technique for determining extended stay review dates according to the most important scheduled operation, the age of the patient, and whether the patient had single or multiple diagnoses.

While the usual procedure for assigning the initial review date is based upon the admitting diagnosis (problem), there are circumstances when a table based upon the contemplated operation is much more meaningful. The latter situations involve diagnoses where two or more quite different operations (and quite different lengths of stay) are appropriate managements. Examples would be benign prostatic hypertrophy (cystoscopy, transurethral resection [TUR] or other prostatectomy), primary malignancy of lung, suspected or previously diagnosed (bronchoscopy or resection of lung) and angina pectoris (coronary arteriography or bypass surgery). Many diagnoses, on the other hand, are usually managed by a single type of operation and the operated section of the diagnosis table and the operation table appear to be almost identical. Examples would be uncomplicated inguinal hernia (herniorrhaphy), acute appendicitis (appendectomy), and chronic cholecystitis with cholelithiasis (cholecystectomy).

---

[1] Medicare regulations formerly referred to "extended duration," PSRO guidelines refer to "continued stay."

An extended stay review date can be projected for each patient at the time of admission to the hospital by using one of the regional length of stay books published by the Commission on Professional and Hospital Activities.[1] With the appropriate book, the five steps to determine a review date are as follows:

Step 1. Find the length of stay operation group (derived from the *ICD-9-CM List B: Hospital Procedure Groups*[2]) that contains the contemplated operation in one of the following ways.

a. Usually the diagnosis can be found in *Concurrent Review Screening,*[3] developed for admission certification and extended stay review purposes, in which diagnoses are listed alphabetically. The length of stay group (in the CPHA length of stay books) for each diagnosis is given in column 4 where appropriate reference is made to the operation tables.

b. For diagnoses not in *Concurrent Review Screening* the contemplated operation can usually be found in the index at the back of the operation length of stay book.

c. If an operation is not listed in the index to the length of stay tables, the code for the operation can be found in Volume 3 of *ICD-9-CM.*[4] That code can then be located in List B or in the heading of the length of stay table.

Step 2. Find the appropriate table in the length of stay book. The group number precedes the title of each table. There are four tables per page for operation groups in the length of stay books.

Step 3. Find the appropriate part of the table for number of diagnoses (single or multiple.

Step 4. Find the correct age group. The five age groupings presented are 0-19 years, 20-34 years, 35-49 years, 50-64 years, and 65 years and over.

Step 5. Find the 50th percentile of stay for similar patients at the point where the 50th percentile column (column 7) of the table intersects the horizontal line which includes the pertinent variables for the patient having an extended stay review date assigned.

Example: On 3 November, a 57-year-old patient is admitted to a Canadian hospital for elective surgery, in this case, a transurethral resection, the admitting diagnosis is prostatic hyperplasia, and no secondary diagnoses are recorded. The following illustrations show the five steps for finding the date on which the patient becomes an extended stay case and must be reviewed.

Step 1. The length of stay group can be found in any of the following ways.

a. Prostatic hyperplasia (benign prostatic hypertrophy) is listed as a diagnosis in *Concurrent Review Screening*. Select the contemplated surgery (TUR). The length of stay table in the operation volume is 648.

Step 5. The 50th percentile day is the date assigned for the initial extended stay review. Column 7 shows the eighth day after admission to be the day that this patient comes up for extended stay review.

The patient was admitted on 3 November; therefore, the eighth day will fall on 11 November. Prior to or on 11 November the UR coordinator, the physician advisor, the UR committee, or other group responsible for conducting extended stay review will make a finding as to whether further stay is medically necessary.

In the above example, the stay percentile used to define extended stay was the 50th percentile (column 7). If, based on the initial review, the patient's stay in the hospital was approved for extension beyond the 50th percentile, the date for the second extended stay review is determined in accordance with the hospital's plan, e.g., 75th percentile (as suggested in the PSRO *Program Manual*, paragraph 705.26).

Subsequent extended stay review dates would ordinarily be set by the physician advisor or the peer review (utilization review) committee as necessary, based on the patient's medical condition and the attending physician's evaluation of the patient's progress.

This group consists of procedures which are coded for indexing, quality review, and purposes other than their effect on length of stay. For the purpose of operation length of stay tables, patients with only these procedures are not considered "operated" patients.

Distribution Tables

Table 1 displays total Canadian patients and days of care (after exclusions*) in each of the operation groups except those consisting solely of UHDDS Class 2-4 procedures** (512, 516, 533, 540, 589, 629, 647, 657, 659, 741, 752, 759, 761, 762, and 763). Also shown is the corresponding rate per 10,000 operated separations and the rate per 10,000 days of care.

Table 1

Distribution of Canadian Patients and Days of Care by *ICD-9-CM* List B Hospital Operation Groups 1979

Operation Group Number and Title (1)	Number of Patients (2)	Rate per 10,000 pts (3)	Days of Care (in 1,000s) (4)	Rate per 10,000 Days (5)
501 Incision, excision of skull, brain, and cerebral meninges	566	11.7	15	41.7
502 Craniotomy and craniectomy	224	4.6	5	14.9
503 Cranioplasty	203	4.2	3	7.2
504 Ventricular shunt, extracranial	119	2.5	4	9.9
505 Miscellaneous operations on brain and cerebral meninges	246	5.1	4	10.2
506 Exploration and decompression of spinal canal structures	797	16.4	14	39.6
507 Operations on spinal cord structures, except exploration	306	6.3	6	17.1
508 Excision or destruction of lesion of cranial or peripheral nerve	626	12.9	4	9.7
509 Miscellaneous operations on cranial and other peripheral nerves	2,250	46.4	9	24.0
510 Sympathectomy	444	9.2	6	17.8
511 Miscellaneous operations on sympathetic nerves and ganglia	92	1.9	1	2.7
513 Thyroidectomy	1,692	34.9	11	31.0

*Excluding patients who died, patients admitted from other short-term hospitals, patients transferred to other hospitals, patients who left against medical advice, and patients staying 100 days or longer.

**Additional information regarding UHDDS classes of procedures can be obtained in *UHDDS Classes of Procedures, ICD-9-CM,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

ICD-9-CM Codes for Selected Operation Groups

ICD-9-CM Codes for Selected Operation Groups

ICD-9-CM codes for operation groups 552, 557, 576, 619, 686, 713, and 741

552	Operations on tongue, oral cavity, and facial region except palatoplasty and operations on salivary glands	25.01-25.02; 25.1-25.5; 25.92-25.99; 27.0-27.24; 27.3-27.5; 27.7; 27.92-27.99
557	Other diagnostic and therapeutic procedures on nose, mouth, and pharynx	21.00-21.01; 21.21; 21.29; 22.19; 24.19; 25.09; 25.91; 26.19; 27.29; 27.91; 28.19; 29.11; 29.19
576	Other diagnostic and therapeutic procedures on larynx, trachea, bronchus, lungs, and heart	31.41-31.42; 31.48-31.49; 33.21; 33.28-33.29; 34.28-34.29; 34.91-34.92; 37.29
619	Miscellaneous diagnostic and therapeutic procedures on digestive tract, abdominal cavity, and abdominal wall	42.22; 42.29; 44.12; 44.19; 45.12; 45.19; 45.22; 45.24; 45.28-45.29; 48.22-48.23; 48.29; 49.21; 49.29; 49.41-49.42; 50.19; 51.19; 52.19; 54.29
686	Miscellaneous diagnostic and therapeutic procedures on female genital system	65.19; 66.19; 67.19; 68.11; 68.19; 69.6; 69.7; 69.92; 70.21; 70.29; 71.19
713	Other reduction of fracture without internal fixation, except maxillofacial and femur	79.00-79.04; 79.06-79.09; 79.20-79.24; 79.26-79.29; 79.40-79.44; 79.46-79.49
741	Other diagnostic and therapeutic procedures on musculoskeletal structure	76.19; 76.96; 81.91-81.92; 81.98; 82.92-82.96; 83.29; 83.94-83.98; 84.41-84.43; 84.45-84.47

Index to the Length of Stay Tables

If an operation does not appear in the Index, its corresponding *ICD-9-CM* code can be found in the *International Classification of Diseases, 9th Revision, Clinical Modification,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978, Volume 3 Procedures: Tabular List and Alphabetic Index. The operation group containing the *ICD-9-CM* code can then be located in the length of stay tables.

OPERATION INDEX

This operation index lists common operations and gives the number of the ICD-9-CM List B operation group to which each operation belongs

Also included are:
- Geriatric Length of Stay in PAS Hospitals, by Diagnosis and Operation, United States, 1979
- Pediatric Length of Stay in PAS Hospitals, by Diagnosis and Operation, United States, 1979

The length of stay series began in 1963, and certain volumes are still available from the Commission on Professional and Hospital Activities. Also for selected years there are length of stay books for particular regional groups of hospitals, for pediatric patients, and for geriatric patients.

PREFACE

This book is one volume of a set of 14 books presenting statistics on hospital stay during 1979 in North America. Twelve volumes describe stays for either diagnoses or operations in the United States, in each of the four U.S. census regions, or in Canada. The thirteenth and fourteenth volumes display data on both diagnoses and operations for pediatric and for geriatric patients in the United States. The complete set is the latest in a series of publications on length of stay in hospitals that participate in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities.

These statistics, which are also available on computer readable magnetic tape, can provide a valuable perspective for physicians, administrators, PSROs, and planners who make decisions based on length of hospitalization. They can also serve as an aid in establishing check points for "continued stay review" (PSRO) and in the implementation or revision of utilization review systems.

We extend our appreciation to the hospitals that supported this study by making their data available.

DISCUSSION OF THE DATA

Source of the Data

Data in this book were compiled from individual patient discharge abstracts submitted by hospitals participating in the Professional Activity Study (PAS) of the Commission on Professional and Hospital Activities (CPHA).

CPHA is an organization dedicated to the improvement of hospital and medical care through research, education, publishing, and systems development. Established in 1955 under grants from the W.K. Kellogg Foundation, CPHA is nonprofit, nongovernmental, noncommercial. CPHA is sponsored by the American College of Physicians, the American College of Surgeons, the American Hospital Association, and the Southwestern Michigan Hospital Council.

The following steps explain, and Figure 1 diagrams, the PAS method of storing and retrieving medical data.

BEST AVAILABLE COPY

1. In each participating hospital, medical record personnel transfer information from the record of each discharged patient onto a PAS Case Abstract (Figure 2). The data may also be put onto a data tape at the hospital.
2. The abstract or tape is mailed to the center of PAS operations in Ann Arbor, Michigan, where it serves as input to the computer system.
3. Data then undergo a comprehensive "cleaning" process and detected errors are corrected by contributing hospitals.
4. The computer system produces sets of reports which give comprehensive statistics on discharged patients plus listings of individual case abstracts in various sequences.
5. The computer system continually adds to a permanent history data file.
6. Length of stay statistics from this file are annually published in this series of length of stay books. The stored data are also available to researchers on a contractual basis.

Data Quality

Data quality has always been and remains one of CPHA's major concerns. Although the hospital has basic responsibility for the quality of PAS data, CPHA shares that responsibility in its role as an extension of the hospital's medical record department.

Quality control of PAS data begins before a new hospital submits its first case abstract and continues as an ongoing system involving personal monitoring, computer checks, and education programs. In spite of these efforts, errors do occur. There are three ways errors can be introduced into PAS data: 1) the basic patient medical record can be incomplete or in error, 2) errors can be made in abstracting information from the medical record to the PAS Case Abstract, and 3) errors can be introduced during processing.

Although CPHA has indirect influence over the quality of the medical record through education and through feedback from use of PAS reports within the hospital, basic responsibility for the accuracy of the medical record rests with the physician and others in the hospital contributing to it. Clearly, the abstractor cannot add to the medical record. Errors or omissions made in it will be carried forward to the PAS Case Abstract.

CPHA goes to considerable lengths to prevent and correct errors in abstracting by training PAS hospital medical record personnel in coding and abstracting methods, by monitoring their work, and by judiciously checking and editing patient data for errors. During processing, over 350 computer checks* are performed on each abstract to check the reasonableness of the data received. When illogical, invalid, or missing data are detected, an error message is printed and the hospital is notified, often by phone. About 40% of the errors detected in the computer audit can be and are corrected at CPHA; the remainder must be handled by the hospitals because only they have the information necessary to make the corrections. Hospitals make such corrections on a voluntary basis.

---

*The following are examples of discrepancies and inconsistencies in the data that are detected by the computer audit: hospital day of operative episode exceeding total stay, cesarean sections with a normal delivery diagnosis, a sex-specific diagnosis or operation with the wrong sex recorded. Examples of invalid data detected by the computer are diagnosis and operation codes that do not exist in the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM),* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

Coverage

The length of stay tables in this book display stay distributions for 2,516,246 geriatric patients discharged during 1979 from 1,660 nonfederal, short-term* hospitals participating in PAS. PAS hospitals in United States territories and Puerto Rico were excluded from this publication as were short-term psychiatric hospitals and hospitals without geriatric discharges participating in PAS. Patients studied were selected from a total of 2,814,462 discharges.

Characteristics of all U.S. hospitals that participated in PAS during 1979 are shown in Tables A and B. Some of these hospitals did not participate for the entire 12-month period. In addition, because of the unavailability of data at the time of processing, data for some of these PAS hospitals are not included in the length of stay tables.

States included in the various census regions and divisions are shown in Figure 3.

Organization of Length of Stay Tables

The length of stay tables in the body of this book are organized according to the diagnosis groupings in *ICD-9-CM List A: Hospital Diagnosis Groups*[1] and the operation groupings in *ICD-9-CM List B: Hospital Procedure Groups.*[2] Within each diagnosis group, patients are further stratified by single or multiple diagnoses, age, and operation status. Within each operation group, the patients are further stratified by single or multiple diagnoses and age.

ICD-9-CM List A: Hospital Diagnosis Groups

With the development of the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM), CPHA List A: Hospital Diagnosis Groups* has been replaced by *ICD-9-CM List A: Hospital Diagnosis Groups* which reflects the diagnoses contained in the new classification.

Patients were assigned to *ICD-9-CM* List A groups on the basis of their final diagnosis explaining admission (UHDDS "principal diagnosis"). This is the diagnosis that after study explains why the patient was admitted to the hospital. Diagnosis information for all patients discharged from PAS hospitals during 1979 was coded using *ICD-9-CM.*

---

[1] *ICD-9-CM List A: Hospital Diagnosis Groups* is based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM),* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

[2] *ICD-9-CM List B: Hospital Procedure Groups* is based on the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM),* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

ICD-9-CM List B: Hospital Procedure Groups

With the development of the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM), CPHA List B: Hospital Operation Groups* has been replaced by *ICD-9-CM List B: Hospital Procedure Groups,* which reflect the procedures contained in the new classification.

In List B there are 249 groups that contain at least one UHDDS Class 1[3] procedure. Fifteen of the 264 List B groups consist solely of Class 2, 3, and 4 procedures. This book displays data only for those 249 groups with Class 1 procedures.

Patients were assigned to the *ICD-9-CM* List B operation groups on the basis of their principal procedure. Operation information for all patients discharged from PAS hospitals during 1979 was coded using *ICD-9-CM.* "Principal procedure" is an item in the Uniform Hospital Discharge Data Set (UHDDS) and generally is that therapeutic procedure most related to the principal diagnosis.

Definition of Multiple Dx Patients

A patient is classified in the multiple dx category if he had at least one valid secondary diagnosis in addition to the principal. The following codes are not considered valid secondary diagnoses for purposes of this classification:

1) Manifestation codes
2) Codes V27.0-V27.9 (outcome of delivery)
3) E Codes (external causes of injury and poisoning)

---

[3] Additional information regarding UHDDS principal procedure and classes of procedures can be obtained in *UHDDS Classes of Procedures, ICD-9-CM,* Commission on Professional and Hospital Activities, Ann Arbor, Michigan, 1978.

Definition of Operated Patients

In the List B tables, an operated patient is one whose principal procedure is among the 249 List B groups that contain at least one Class 1 procedure. In the List A tables, however, a patient is considered operated if he has at least one Class 1 procedure recorded either as the principal procedure or as a secondary procedure. As a result, the total count of operated patients in the diagnosis tables exceeds the total count of operated patients in the procedure tables.

Explanation of Statistics

The diagnosis (operation) group titles heading the tables are followed in parentheses by the diagnosis (operation) codes they include. These codes refer to *ICD-9-CM.*

Length of stay is calculated from admission and discharge dates entered on the PAS Case Abstract, counting the day of admission but not the day of discharge. Patients discharged on the day of admission were counted as staying one day in the calculation of average stay and variance, but as staying less than one day in the calculation of the percentiles. Thus, if more than 5% of the patients in a cell were discharged on the day of admission, the 5th percentile is shown as "<1".

Patients who were hospitalized 100 days or longer are not included in column 2, "Number of Patients"; column 3, "Average Stay"; or column 4, "Variance." The percentiles shown in columns 5 through 11, however, do include these patients.

The variance displayed is an unbiased estimate of the mean squared deviation from the average. For each cell it is calculated as $\sum_{i=1}^{N} (X_i - \overline{X})^2/(N-1)$, where the X_i's are the length of stay for each patient, $\overline{X}$ is the average stay in the cell, and N is the number of patients in the cell.

The 5th, 10th, 50th, 75th, 90th, 95th, and 99th percentiles of stay are shown. If, for example, the 10th percentile for a group of patients is four days, it means that ten percent of the patients stayed four days or less. The 50th percentile is the median. Any percentile with a value of 100 days or more is listed as 99+.

The value of a percentile for a group of patients is determined by arranging the individual patients' stays from low to high. Counting up from the lowest stay to the point where half of the patients have been counted yields the value of the 50th percentile. Counting off one-tenth of the total patients gives the 10th percentile, and so on.

Exclusions

The length of stay diagnosis and operation tables exclude:

(1) patients who died,
(2) patients admitted from other short-term hospitals,
(3) patients discharged to other short-term hospitals,
(4) patients discharged against medical advice,
(5) patients with length of stay greater than 99 days (these patients are included only in the percentile calculations).

These patients are excluded because they are not typical short-term patients (i.e., their stays are not "manageable" by the physician).

Other exclusions from the diagnosis and operation tables include patients with incalculable age or stay, illegal or unrecorded principal diagnosis, unrecorded discharge status, and patients with diagnosis-age or diagnosis-sex inconsistencies.

Additional exclusions from the operation tables only include patients with illegal or unrecorded principal procedure, and patients with operation-age and operation-sex inconsistencies.

Defining the Extended Stay[1] Case

Concurrent review of a continuous hospital stay that equals or exceeds the period defined in the hospital's utilization review plan or memorandum of understanding with the PSRO is called extended stay review. This review, whether applied universally to all patients within the facility or "focused" on known or suspected problem areas, is designed to answer the following question: Is further hospitalization medically necessary?

Ideally, this question is posed at that point in the patient's hospitalization which is neither so early as to be annoyingly pointless nor so late that opportunity for cost containment has passed. The median (50th percentile) stay for similar patients, as reflected in reasonably current length of stay tables, represents an effort to arrive at a sensible compromise as to the "correct" day on which to initiate the review process.

To satisfy the requirements for extended stay review, a method of defining an extended stay must begin with a definition of factors that affect stay. Presented here is a technique for determining extended stay review dates according to the admitting diagnosis, the age of a patient, whether the patient had single or multiple diagnoses, and whether that patient had an operation. In some instances it is appropriate to determine the date for extended stay review by referring to an operation table rather than one based upon the diagnosis.

---

[1] Medicare regulations formerly referred to "extended duration," PSRO guidelines refer to "continued stay."

An extended stay review date can be projected for each patient at the time of admission to the hospital by using one of the regional length of stay books published by the Commission on Professional and Hospital Activities.[2] With the appropriate book, the six steps to determine a review date are as follows:

Step 1. Find the length of stay diagnosis group (derived from the *ICD-9-CM List A: Hospital Diagnosis Groups*[3]) that contains the admission diagnosis in one of the following ways:

a. Usually the diagnosis can be found in *Concurrent Review Screening,*[4] developed for admission certification and extended stay review purposes, in which diagnoses are listed alphabetically. The length of stay group (in the CPHA length of stay books) for each diagnosis is given in column 4.

b. Diagnoses not in *Concurrent Review Screening* can usually be found in the alphabetic index at the back of the length of stay books.

c. If a diagnosis is not listed in the index to the length of stay tables, the code for the diagnosis can be found in Volume 2 of *ICD-9-CM.*[5] That code can then be located in List A or in the heading of the length of stay table.

d. If a diagnosis is not clearly specified and therefore might fall into one of several diagnosis groups, the attending physician should be consulted.

Step 2. Find the appropriate table in the length of stay book. The group number precedes the title of each table. There are two tables per page for diagnosis groups in the length of stay books.

Step 3. Find the appropriate part of the table for number of diagnoses (single or multiple).

Step 4. If surgery is planned, find the applicable section for operated patients. For some diagnoses, two or more operations with widely different lengths of stay are commonly performed, e.g., primary malignancy of trachea, bronchus, and lung, where the planned operation may be either bronchoscopy or a major lung resection. The second edition of *Concurrent Review Screening* directs the UR coordinator to the appropriate *operation* length of stay table.

Step 5. Find the correct age group. The five age groupings presented for Geriatric patients are 65-69 years, 70-74 years, 75-79 years, 80-84 years, and 85 years and over.

Step 6. Find the 50th percentile of stay for similar patients at the point where the 50th percentile column (column 7) of the table intersects the horizontal line which includes the pertinent variables for the patient having an extended stay review date assigned.

Example: On 3 November, a 67-year-old patient is admitted to a United States hospital for elective surgery. The admitting diagnosis is cholelithiasis and no secondary diagnoses are recorded. The following illustrations show the six steps for finding the date on which the patient becomes an extended stay case and must be reviewed.

Step 1. The length of stay group can be found in any of the following ways:

a. Cholelithiasis is listed as a diagnosis in *Concurrent Review Screening*. The length of stay table is number 215.

The patient was admitted on 3 November; therefore, the ninth day will fall on 12 November. Prior to or on 12 November, the committee or groups responsible for conducting extended stay review will make a finding as to whether further stay is medically necessary.

In the above example, the stay percentile used to define extended stay was the 50th percentile (column 7). If, based on the initial review, the patient's stay in the hospital was approved for extension beyond the 50th percentile, the date for the second extended stay review is determined in accordance with the hospital's plan, e.g., the 75th percentile (as suggested in the *PSRO Program Manual*, paragraph 705.26).

Subsequent extended stay review dates should be set by the physician advisor or the peer review (utilization review) committee as necessary, based on the patient's medical condition and the attending physician's evaluation of the patient's progress.
